

PRO FEEDER

You should have received the following:

- 1 Feeder
- 1 Cap
- 2 Ladders
- 3 Cap Bands

Putting Your Feeder Together:

STEP ONE- Start by putting the ladder into the wood cap. Simply take the open end of the ladder and push it into the bottom of the pre-drilled hole on the wood cap. The ladder should be pushed in until it is even with the wood cap. Push a thumb tack into the ladder and cap, this will help hold the ladder in place when moving your hives. Repeat steps for remaining ladder. When you are done, the closed ends of the ladder will be facing down, and the open ends should be even with the wood cap.

STEP TWO- Place the cap and ladder into the feeder.

STEP THREE- The last step will be placing the cap bands onto the cap. Put one part of the band onto the hook on the top of the feeder, then pull the band over the cap to the other side. Repeat.

STEP Four- Remove 1 outside frames replace with feeder. To fill slide cover over just enough to expose feeder, fill through feeder hole.
