

# Drawer Pollen Trap WW-200

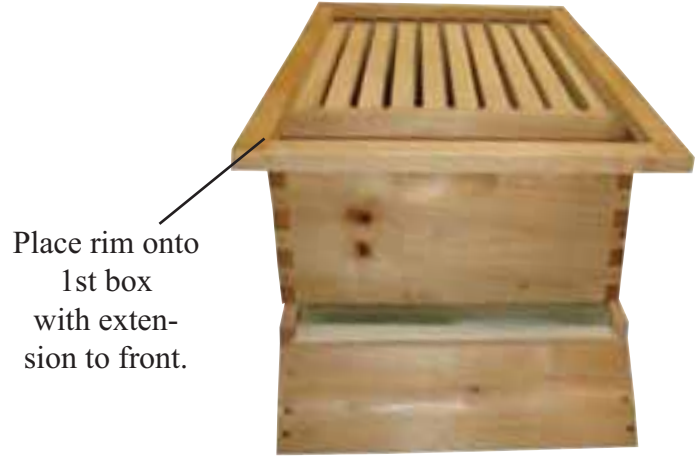

800-880-7694

January 28, 2009 11:06 AM

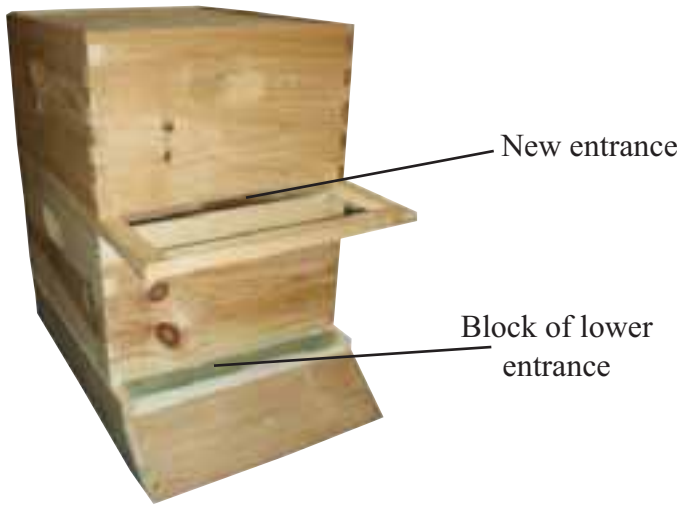

**Step One:**

Assemble the rim place the end bar and side bar together nail or staple the corners together.

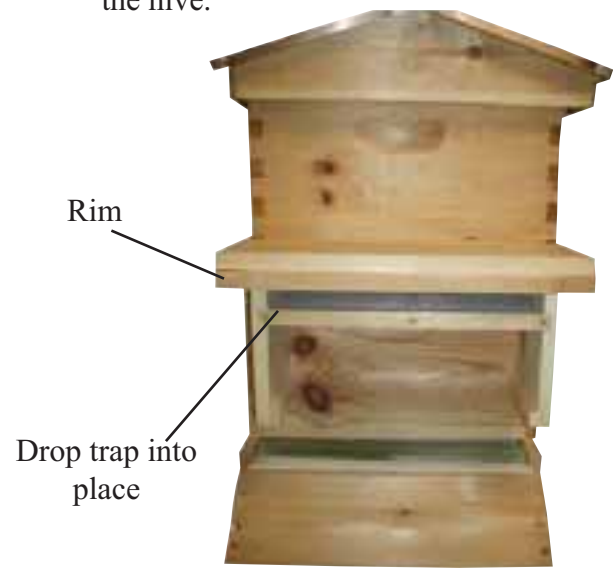

**Step Two:**

Place the rim between 1st and 2nd body with extension to the front. Place boxes back onto the hive.

**Step Three:**

Block of lower entrance completely forcing the bees to use the new entrance between 1st and 2nd body. Permit bees to become accustomed to new entrance before installing tap.

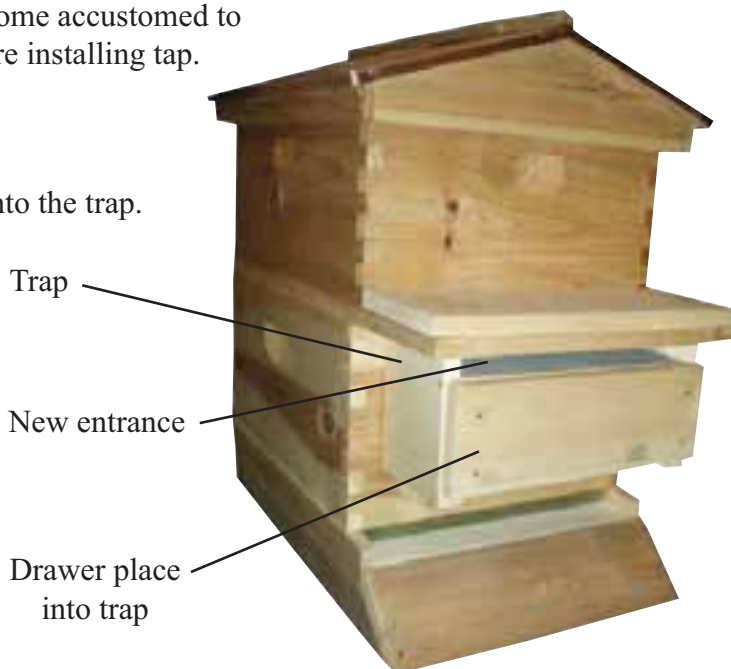

**Step Four:**

Drop trap into place in the evening when bees are in the hive and when pollen collection is desired.

**Step Five:**

Place the drawer into the trap.

**Reminder:**

Remove pollen by sliding the drawer out. Close trap entrance approximately every 5 days and open traditional to allow the bees to store some pollen. Remember, pollen should be trapped only when there is a major pollen flow. Freshly trapped pollen is perishable and should be dried immediately until pellets do not cake when squeezed between fingers.
