

PRO FEEDER & MAX PRO FEEDER

FD-505 - 507 , FD-525 - 527

FD-545 - 547

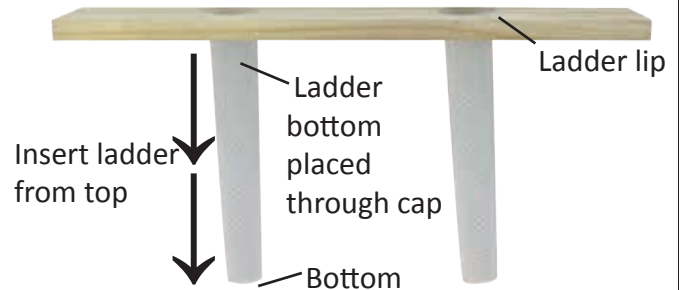

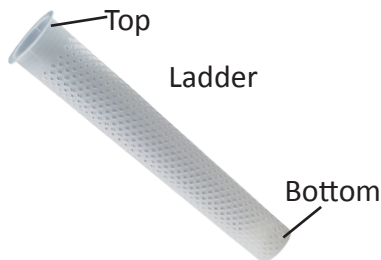

For Each Feeder Ordered You Should Have Received:

- 1 Feeder
- 1 Cap (wood piece with 2 holes)
- 2 Ladders (mesh plastic tubes)
- 3 Cap Bands (black bands)

FD-505
Shown

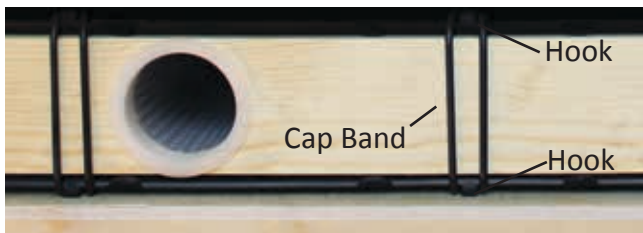

Putting Your Feeder Together:

STEP ONE- Start by putting the ladder into the wood cap. Simply take the bottom end of the ladder and push it into the top of the pre-drilled hole on the wood cap. The ladder should be pushed down until it is even with the wood cap. Repeat steps for remaining ladder. When you are done, the closed ends of the ladder will be facing down, and the end should rest evenly on top of the wood cap.

STEP TWO- Place the cap and ladder into the feeder.

STEP THREE- The last step will be placing the cap bands onto the cap. Put one part of the band onto the hook on the top of the feeder, then pull the band over the cap to the other side. Repeat.

STEP FOUR- Remove 1 outside frame (1½ gallon and 2 gallon require 2 frames) replace with feeder. To fill slide cover over just enough to expose feeder, fill through feeder hole.

U.S. Patent No. 8,475,227
